Quick Facts: Launched in 1983 as AutoCAD 2D, the last model before 3D became available Introduced in 1986 as the first true 2D AutoCAD, has since evolved Conceived in 1972, AutoCAD 2D is Autodesk's first CAD application It is Autodesk's flagship product, accounting for over 50% of Autodesk revenues AutoCAD was, and still is, very costly, but years of investment in new technologies and features led to an increase in performance and practicality After several more iterations of AutoCAD, Autodesk finally released AutoCAD LT and, with it, its first official 3D solution. Today, Autodesk still believes in and invests in AutoCAD. It is the most successful and most important CAD product in the company's history. In 1988, Autodesk introduced AutoCAD Map 3D. It was one of the first CAD products to support true, continuous space representation of a 2D CAD model. The product's success led to the development of another 3D CAD application – AutoCAD 2007 – and the emergence of the new category of AutoCAD Map. In 2012, Autodesk released a new flagship product for non-AutoCAD users. It is called AutoCAD Architecture. Since the 1970s, Autodesk has been pioneering the real-time visualization of complex geometry. The designers of the groundbreaking, 3D drafting program, Pro/ENGINEER, are credited with pioneering this technology. AutoCAD was Autodesk's first 3D application, but Autodesk was not the first company to develop CAD applications in 3D. The first was Franklin Automation, later acquired by Unigraphics, which had been founded in 1969. In the 1980s, when Autodesk was preparing AutoCAD 2D, its first 3D applications were already available. Today, AutoCAD, AutoCAD LT and AutoCAD Map are key to Autodesk's revenue, and hence, to its success. AutoCAD and its variations, including AutoCAD LT, are the best-selling desktop CAD applications. In 2016, Autodesk introduced AutoCAD Map 3D, a mobile application that allows users to virtually walk through their drawings

On one side there is the combination of a Western coalition of states, led by the United States, and the Ukrainian army, with Western support and direct military intervention. On the other side is Russia and its allies, whose armed forces have bombarded the rebel-held areas of eastern Ukraine and who have used artillery, tanks, infantry and other armored vehicles. But how can we assess the relative intensity of the two sides' war-making? What the Official Narrative of 'Sensible and Logical' Diplomacy Cannot Deny Some mainstream observers regard Ukraine as more or less a 'victim' of war, while the government of Russia is mainly responsible for the conflict. This ignores the facts, however. There are a number of important details that this commentary will discuss: The true origin of the crisis: The issue of the Crimea is just one symptom of a wider conflict and of an acute geopolitical situation in which Russia, Ukraine and the West face off against one another in the struggle for influence in central and eastern Europe. The crisis in Ukraine is a symptom of the crisis in the region. Russian armed forces in Syria: During the Ukrainian crisis, Russian armed forces have played an essential role in the war-making of the separatists in a1d647c40b
